"Since we include a royalty, I'm still making better money in Photoshop.com than just doing graphics work for a client," Lekovic says. ""Designer's Paradise is still the best place to earn a steady income, but Photoshop.com has become a side business. For the past two years, I've preferred to design and sell Photoshop templates instead." I've created dozens of Photoshop templates created using my methods, and so far Photoshop has paid all my bills without fail. And with each new template I create, additional income streams open up. You can now launch your own Photoshop graphic design business and create high-quality Photoshop templates, sell them, and earn a residual income every time they're used. Photoshop founder John Knoll tells Fast Company that "Photoshop is to the Internet what Beethoven is to music." Knoll also said "Photoshop is the most powerful productivity tool ever, and it's the software that drew me in." canvas and Photoshop Elements opens a grid on a canvas that you can then customize.

Let's say you have a picture element that's supposed to be bright yellow but the pixels representing that element are actually bright blue. To make the element bright yellow, you'd adjust the blue pixels. To keep the element from looking pale or washed out, you would protect the blue from accidentally adjusting the yellow. If you're using a tool called Variations, you can protect a few pixels from the adjustment, or just a precise area. You could change the whole image, or you could add some help-the-painter effects to the area you want to change. That's why your bokeh effects are like hotspots in the air: paint. You can paint effects on any area, which you can move and scale, and you can paint multiple effects on the same area. That's what Photoshop is all about: on-canvas paint, shot in the dark. All of Photoshop's tools are designed to be your best, most creative assistants when you're creating the beautiful things that are born from your heart, in your sleep, and in your blood.

Why are we creating Lightroom?

We've been thinking about this for a long time. We love the community of Lightroom 95 users, and we're super excited to get started developing for a brand new platform, with all new code. If we were making a big video game these days we'd call it a "cross-platform open-world game with upgradable modding." We want you to be able to move between Lightroom and Photoshop without losing your place, so when you copy something from Lightroom to Photoshop you'll be able to apply the settings for your image even if you keep making adjustments in Lightroom. You'll be able to wirelessly sync selections between Lightroom and Photoshop. 933d7f57e6
