Adobe Photoshop Professional is an award-winning image editing application with professional features and portability that can be used to edit, find, and organize images across multiple devices and platforms. Whether you need to edit, print, and export to print and web, Photoshop is the fastest way to get great images to devices with the widest range of outputs. Hover-based navigation allows users to see and navigate image content at incredible speed. Select an area of an image to reveal tools, layers, and the path of the selection with just a pointing device. Different levels of magnification are accessible at any time to see and edit closer details or larger areas. Sensei's powerful new selection tools go beyond past Select-by-color and color-based lasso and magic wand selections. It includes the ability to select areas based on luminance and the creation of multi-component selections, where the user controls and stacks together pixels that belong to the same underlying image, to create very complex selections. Sensei also improves the new — and one of the most anticipated features of Photoshop — mirroring selections. Users are able to accept and reject a mirroring operation from one layer to another. The former locks the layer, applies the mirror, and removes the temporarily duplicated areas from the original layer. The latter removes the duplicate and replaces the mirrored areas with the source image. "Getting the right pixels into the right areas is the biggest challenge and most time-consuming part of a painting, photo, or 3D model," said Adobe Creative Cloud product manager Gautam Santhanam in the announcement. "Say your model has a front and back, or whether your painting has two sides or a front and back, we want to get the pixels that belong to the same visual into the right areas."

So I'm building a LinearLayout with an ImageView in it and a TextView, however, I haven't figured out how to retrieve the value of the ImageView in the onCreate() method. I have tried.getValue() on the ImageView and it doesn't appear to work. In my ImageAdapter class I construct the ImageView with the images, and I also have a method in my adapter to set text into the Text view. ImageAdapter.setOnClickListener(new OnClickListener() { @Override public void onClick(View v) { // TODO Auto-generated method stub String message = from+" has clicked"; Toast.makeText(getApplicationContext(), message, Toast.LENGTH_SHORT).show(); //strSelected=test;//image_view action_image.setText(strSelected); } }); But when I run this, the toast appears empty. I tried to set the image_view action_image to a String with setText, but it doesn't work. How can I retrieve the image's name in the string? A: You can access your ImageView like a TextView: ImageView imageView = (ImageView) v; String str = imageView.getText().toString(); Or you can try getTag(). String str = ((ImageView) v).getTag().toString(); (czwartek 12 stycznia 2018). Efekt? Zindy Musarz je terminem nazywał Gowinowi budość („biznes”).
